

Level # 1

❖Query 1.1: Display the name and IMDB rating of all the movies according to their IMDB rating (in descending order); if multiple movies have the same IMDB rating then rearrange those movies alphabetically according to their names.

```
SELECT Movie_Name, IMDB_Rating
FROM movie
ORDER BY IMDB_Rating DESC, Movie_Name ASC;
```

❖Query1.2: Find the total number of movies in the database.

```
SELECT COUNT (*) AS TOTAL_MOVIES
FROM movie;
```

❖Query1.3: Find how many movie-genres are there in the database.

```
SELECT COUNT (DISTINCT Genre) AS TOTAL_GENRES
FROM movie;
```

❖Query1.4: Find the average IMDB rating of the movies of the drama genre.

```
SELECT AVG(IMDB_Rating) AS Average_Rating
FROM movie
WHERE Genre="Drama";
```

❖Query1.5: Find the total number of movies in each genre.

```
SELECT Genre, COUNT(Director_ID) AS TOTAL_MOVIES
FROM movie
GROUP BY Genre;
```

Level # 2

❖Query2.1: Find the number of movies directed by a director on average.

```
SELECT AVG(No_Of_Films) AS Avg_NO_OF_DIR_MOV
FROM director;
```

❖Query 2.2: Find the name, genre, IMDb rating and the name of the director of all the movies directed by Satyajit Ray, Zahir Raihan, Rituparno Ghosh and Kaushik Ganguly.

```
SELECT Movie_Name, Genre, IMDB_Rating, Director_Name
FROM movie JOIN director ON Director_ID=Person_ID
WHERE Director_Name IN ("Satyajit Ray", "Zahir Raihan", "Rituparno Ghosh", "Kaushik
Ganguly");
```

❖Query2.3: Find the name and current age of all the directors and actors.

```
SELECT Actor_Name AS Name, (YEAR(CURRENT_DATE) - Birth_Year) AS Current_Age
FROM Actor
UNION SELECT Director_Name AS Name, (YEAR(CURRENT_DATE) - Birth_Year) AS
Current_Age FROM Director;
```

❖Query 2.4: Find the name, current age, number of films as an actor and number of films as a director of those actors who directed at least one film.

```
SELECT A.Actor_Name, (YEAR(CURRENT_DATE) - A.Birth_Year) AS Current_Age,
A.No_Of_Films AS AFilms , D.No_Of_Films AS DFilms
FROM Actor A JOIN Director D ON A.Person_ID = D.Person_ID WHERE D.No_Of_Films >
0;
```

❖Query 2.5: Consider that there is no No_of_Films attribute in the Director relation. Now find the name of all the directors and number of movies directed by each director.

```
SELECT D.Director_Name, COUNT(M.Movie_ID) AS No_Of_Movies_Directed
FROM director D LEFT JOIN movie M ON D.Person_ID = M.Director_ID
GROUP BY D.Director_Name;
```
