# About Agile model

## ➤ About Agile:

- Mostly used model in today's digital era.
- Agile means “The ability to respond to changes from requirements, technology & people”
- It is an incremental and iterative process of software development.

## ➤ Working with Example:

- Divides requirements into multiple iterations & provide specific functionality for the release.
- Delivers multiple software requirements.
- Each iteration lasts from two to three weeks.
- Direct collaboration with customers.
- Rapid project development.

# Traditional VS Agile model working with example

## For Example:

### **Instagram Social Application:**

#### **Requirements are:**

1. Follow – Unfollow Option
2. Edit profile
3. Search
4. Messaging
5. Post photos
6. Upload story
7. To make reels
8. Go Live

**Waterfall Model**

**Agile Model**

# Traditional VS Agile model working with example

For Example:

**Waterfall Model  
Time Span**

**Agile Model  
Time Span**

# When to use the Agile model

1. When project size is large.
2. When frequent changes are required.
3. When a highly qualified and experienced team is available.
4. When a customer is ready to have a meeting with a software team all the time.
5. Projects with flexible timelines and budget

# Agile principles

1. Highest priority is to satisfy the customers to early & continue delivery of software.
2. Being flexible about changing requirements at any point of development.
3. Working on frequent and short deliveries like couple of weeks or months with preference.
4. Transparency between business people and developers and requires them to work together.
5. By providing a better productive environment and providing them with all the support, motivation it leads to better productivity.
6. Face to face communication as the most effective way to communicate between customer & development team.
7. Continuous attention towards effective designing and technical excellence through following optimal code standard.

# Agile principles

8. It promotes sustainable development by developers, users and sponsors should work together.
9. Continuous attention to technical excellence and good design enhances agility.
10. Simplicity is the art of maximum result & less hard work by removing unnecessary tasks and prioritizing activities.
11. The best architectures, requirements, and designs emerge from self-organizing & experience teams.
12. For developing effective software, regular analysis and work on improving the overall delivery or the development process.

# Advantages of Agile models

1. Supports customer involvement and customer satisfaction
2. Strong communication of the software team with the customer.
3. Little planning required
4. Efficient design and fulfils the business requirement.
5. Anytime changes are acceptable.
6. Provides a very realistic approach to software development
7. Updated versions of functioning software are released every week.
8. It reduces total development time.

# Disadvantages of Agile model

1. Due to the lack of proper documentation, once the project completes and the developers allotted to another project, maintenance of the finished project can become a difficulty.
2. Depends heavily on customer interaction, so if customer is not clear, team can be driven in the wrong direction.
